Summary

I am a Graduate in Computer Games Design and Development at Cardiff Metropolitan University interested in game mechanics and how to make them work in different kind of games. I have experience in C++ and C# using them in Unity and Unreal Engine but also in lower API. I have taken part in some cooperative events like the Global Game Jams and other organised by the university where I filled different roles, from designing UI to porting games in different platforms. I am very curious about new ways to implements mechanics and I look foward for my new experiences.

Education
